“Some 40,000 years ago, Cro-Magnons -- the first people who had a skeleton that looked anatomically modern -- entered Europe, coming from Africa.” [1].

“Neanderthals are our closest extinct human relative” Smithsonian national museum of natural history [2].

Since positing a couple of years ago that if Adam and Eve existed, they had to have been platinum blonde Caucasians I have come under fire from one or two individuals [3]. What these critics don't realize is that according to many evolutionists the first modern human beings were light skinned too! According to Cambridge University Press' Biological Sciences it is said that all human ethnicities arose from Cro Magnon man [4]. But reconstructions of the Neanderthal man and Cro Magnon man show them to be light/white skinned. This is so at The Neanderthal museums in Croatia and Germany, The British Museum and The Hall of Human origins at The Smithsonian. So the bottom line is that whether we arrived here by creation or evolution our ancestors were presumably pale skinned. Whether “out of Eden” or “out of Africa” the first human beings were light skinned. Et tu, Darwin? Et tu evolutionists? [5-12].

Senescence Evanescence

“Personally, I like to joke that the reason all shades and colours of human hair turn grey as we age is to pay homage to our greatest grandfather and ancestor-platinum blonde haired Adam” –Seun Ayode [3].

Excluding outbreeding, changes in melanin related characteristics of Homo sapiens almost always occurs in the direction of increasing melanin content and rarely in the opposite direction. Hence we have children born light blondes becoming darker blondes or brunettes in later life but hardly ever the reverse. Also, eye colour can change from lighter to darker but rarely in the opposite direction. This even applies to corpses. Blonde skeletons/mummies have been exhumed and after years of display have turned brunette, but brunette corpses have never turned blonde over time. A blonde can jump in a swimming pool and temporarily become brunette when the hair gets wet. But if a brunette jumps in a pool the hair does not turn blonde. The changes, short term or long term always go in the “light to dark” direction but hardly ever in the “dark to light” direction.

As we age, however, due to loss of pigments all hair types and colours go grey. This shows that the “default setting” of human hair is grey/white- further proof that if Adam and Eve existed they were platinum blonde Caucasians.
